# PRACTICAL 1

1. Introduction to Android, Introduction to Android Studio IDE, Application Fundamentals: Creating a Project, Android Components, Activities, Services, Content Providers, Broadcast Receivers, Interface overview, Creating Android Virtual device, USB debugging mode, Android Application Overview. Simple “Hello World” program.

## Solution:

Creating a project:

Create New Project

 Target Android Devices

**Select the form factors and minimum SDK**  
Some devices require additional SDKs. Low API levels target more devices, but offer fewer API features.

☒ **Phone and Tablet**  
API 15: Android 4.0.3 (IceCreamSandwich) ▼  
By targeting **API 15 and later**, your app will run on approximately **100%** of devices. [Help me choose](#)  
☐ Include Android Instant App support

☐ **Wear OS**  
API 23: Android 6.0 (Marshmallow) ▼

☐ **TV**  
API 21: Android 5.0 (Lollipop) ▼

☐ **Android Auto**

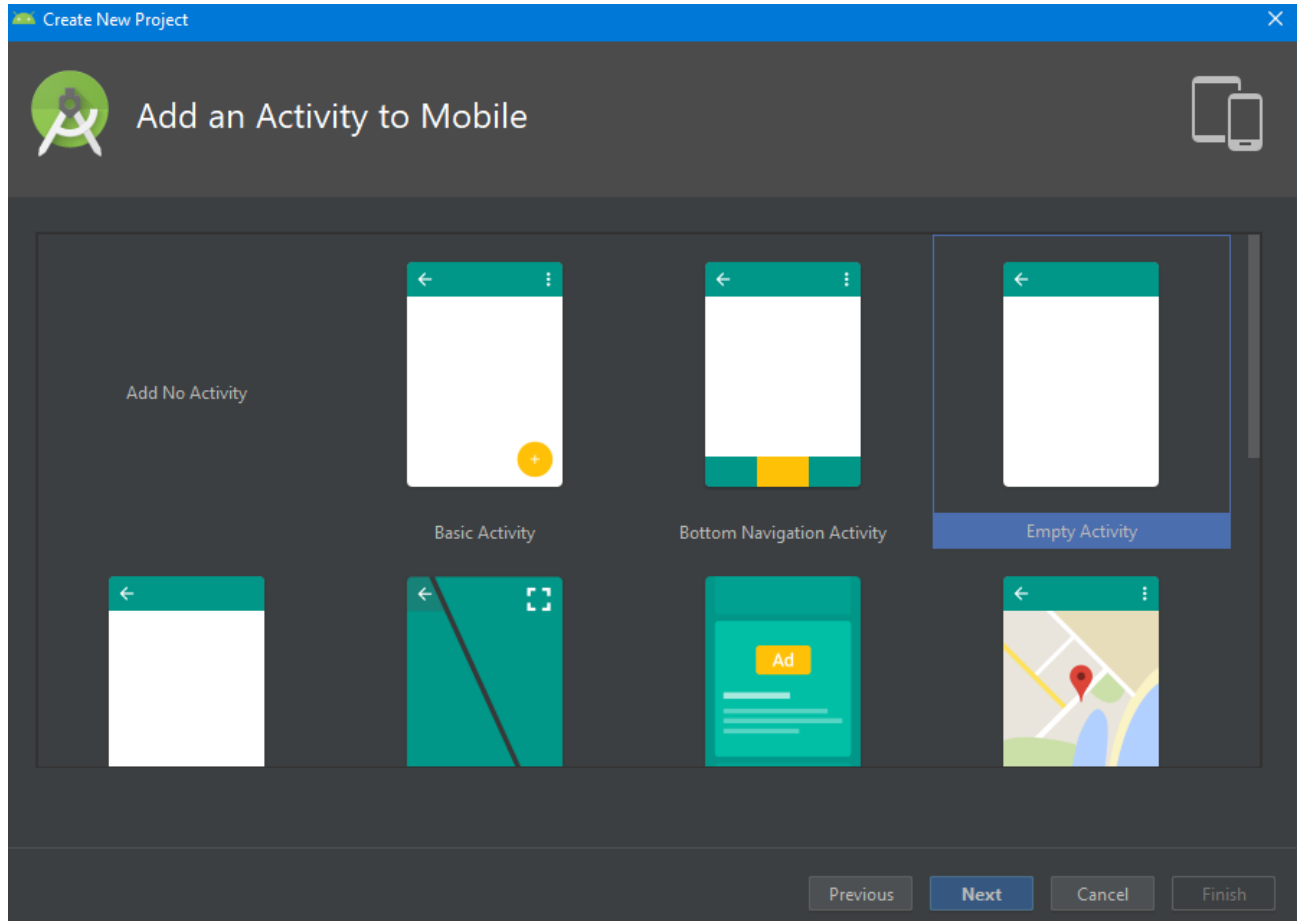

☐ **Android Things**  
API 24: Android 7.0 (Nougat) ▼

## Activity\_Main.Kt

```
package com.rohit.hello

import android.support.v7.app.AppCompatActivity
import android.os.Bundle

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
    }

}
```

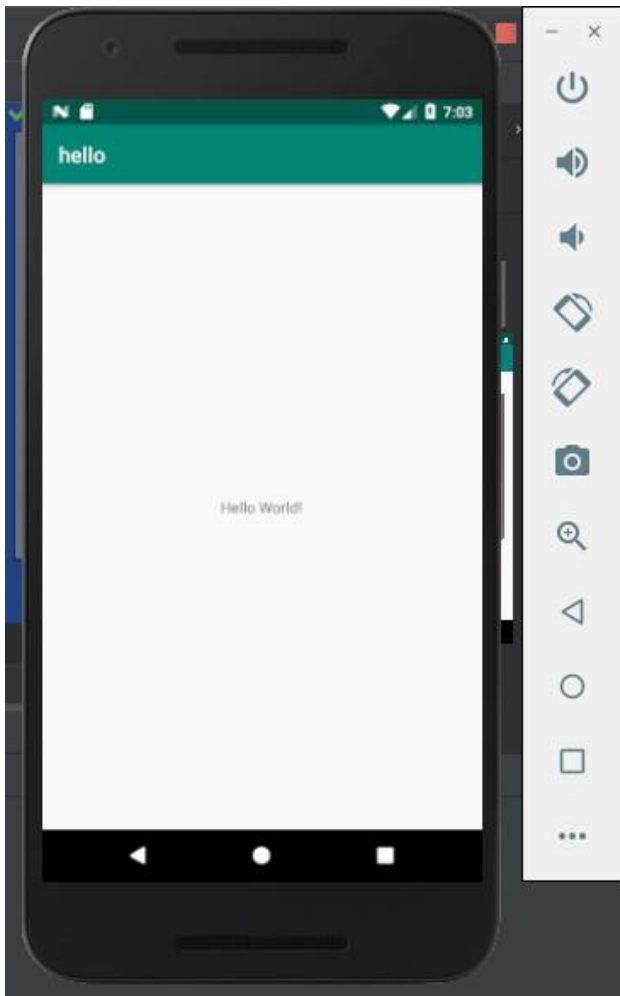

## Activity\_Main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<android.support.constraint.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello World!"
```

```
app:layout_constraintBottom_toBottomOf="parent"  
app:layout_constraintLeft_toLeftOf="parent"  
app:layout_constraintRight_toRightOf="parent"  
app:layout_constraintTop_toTopOf="parent"/>  
</android.support.constraint.ConstraintLayout>
```

Apk in avd:

## BroadcastActivity:

How to receiving Broadcast

Apps can receive and android BroadcastReceiver in two ways: through manifest-declared receivers and context-registered receivers. In this example, we are approaching manifest-declared Receiver. Learn step by step to the kotlin broadcast receiver example works.

Step 1. Create an android app, For creating an Android app with kotlin read this tutorial.

Step 2. Creating Broadcast Receiver

Create and extend Subclass and BroadcastReceiver implement. onReceive(Context, Intent) where onReceive method each message is received as an Intent object parameter.

MyReceiver.kt:

```
import android.content.BroadcastReceiver
```

```
import android.content.Context
```

```
import android.content.Intent
```

```
import android.widget.Toast
```

```
class MyReceiver : BroadcastReceiver() {
```

```
    override fun onReceive(context: Context, intent: Intent) {
```

```
        // TODO: This method is called when the BroadcastReceiver is receiving
```

```
        // an Intent broadcast.
```

```
        Toast.makeText(context, "Broadcast : Flight mode changed.",
```

```
            Toast.LENGTH_LONG).show()
```

```
    }
```

```
}
```

3. Declare a broadcast receiver in the manifest file

add the element<receiver> in your app's manifest. Here is code snap

```
<?xml version="1.0" encoding="utf-8"?>

<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="in.eyehunt.androidbroadcasts">

    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:label="@string/app_name"

        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportsRtl="true"
        android:theme="@style/AppTheme">

        <activity android:name=".MainActivity">
            <intent-filter>

                <action android:name="android.intent.action.MAIN" />

                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>

        <receiver
            android:name=".MyReceiver"
            android:enabled="true"
            android:exported="true">
```

<intent-filter>

<action android:name="android.intent.action.AIRPLANE\_MODE"/>

</intent-filter>

```
</receiver>
```

```
</application>
```

```
</manifest>
```

Note: If the app is not running and broadcast receiver declared in AndroidManifest.xml, then the system will launch your app.

Step 4. MainActivity code, no needs to do anything

MainActivity.kt:

```
import android.support.v7.app.AppCompatActivity
```

```
import android.os.Bundle
```

```
class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
    }
}
```

Step 5. Add following code in main\_activity.xml

add <ImageView> and <TextView> widget layout file.

main\_activity.xml:

```
<?xml version="1.0" encoding="utf-8"?>
```

```
<android.support.constraint.ConstraintLayout
```

```
xmlns:android="http://schemas.android.com/apk/res/android"
```

```
xmlns:app="http://schemas.android.com/apk/res-auto"
```

```
xmlns:tools="http://schemas.android.com/tools"
```

```
android:layout_width="match_parent"
```

```
android:layout_height="match_parent"
android:background="@color/colorPrimary"
tools:context="in.eyehunt.androidbroadcasts.MainActivity">
```

```
<ImageView
```

```
    android:id="@+id/imageView"
    android:layout_width="40dp"
    android:layout_height="40dp"
    android:layout_margin="8dp"
    android:layout_marginTop="16dp"

    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:srcCompat="@mipmap/baseline_airplanemode_active_white_24" />
```

```
<TextView
```

```
    android:id="@+id/textView"
    android:layout_width="300dp"
    android:layout_height="36dp"
    android:layout_marginEnd="8dp"
    android:layout_marginStart="8dp"
    android:gravity="center_vertical"
    android:text="Flight Mode"

    android:textColor="@color/colorWhite"
    android:textSize="24dp"
    app:layout_constraintEnd_toEndOf="parent"
```

```
app:layout_constraintStart_toEndOf="@+id/imageView"
```

```
app:layout_constraintTop_toTopOf="@+id/imageView" />
```

</android.support.constraint.ConstraintLayout>

## Create and manage virtual devices:

To open the AVD Manager, do one of the following:

- Select Tools > AVD Manager.
- Click AVD Manager icon in the toolbar.

## Your Virtual Devices

Android Studio

Type	Name	Play Store	Resolution	API	Target	CPU/ABI	Size on Disk	Actions
	10.1 WXGA (Tablet) API...		800 × 12...	23	Android 6.0...	x86	2 GB	
	Android Wear Square A...		280 × 2...	26	Android 8.0...	x86	650 ...	
	Nexus 5X API 26		1080 × 1...	26	Android 8.0...	x86	1 GB

# PRACTICAL 2

## Programming Resources

Android Resources: (Color, Theme, String, Drawable, Dimension, Image).

### Color:

### Color.xml

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
    <color name="colorPrimary">#008577</color>
    <color name="colorPrimaryDark">#00574B</color>
    <color name="colorAccent">#D81B60</color>
</resources>
```

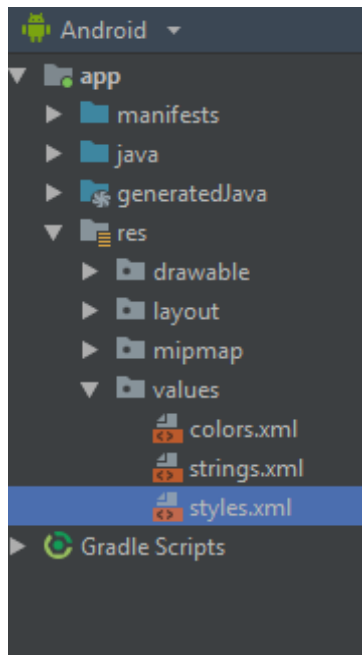

### Theme:

### Style.xml

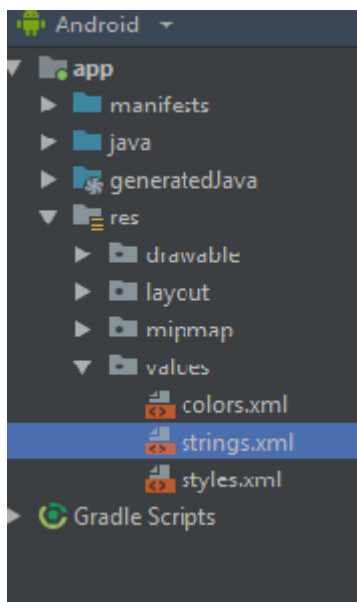

```
<resources>

    <!-- Base application theme. -->
    <style name="AppTheme" parent="Theme.AppCompat.Light.DarkActionBar">
        <!-- Customize your theme here. -->
        <item name="colorPrimary">@color/colorPrimary</item>
        <item name="colorPrimaryDark">@color/colorPrimaryDark</item>
        <item name="colorAccent">@color/colorAccent</item>
    </style>

</resources>
```

## String:

## String.xml:

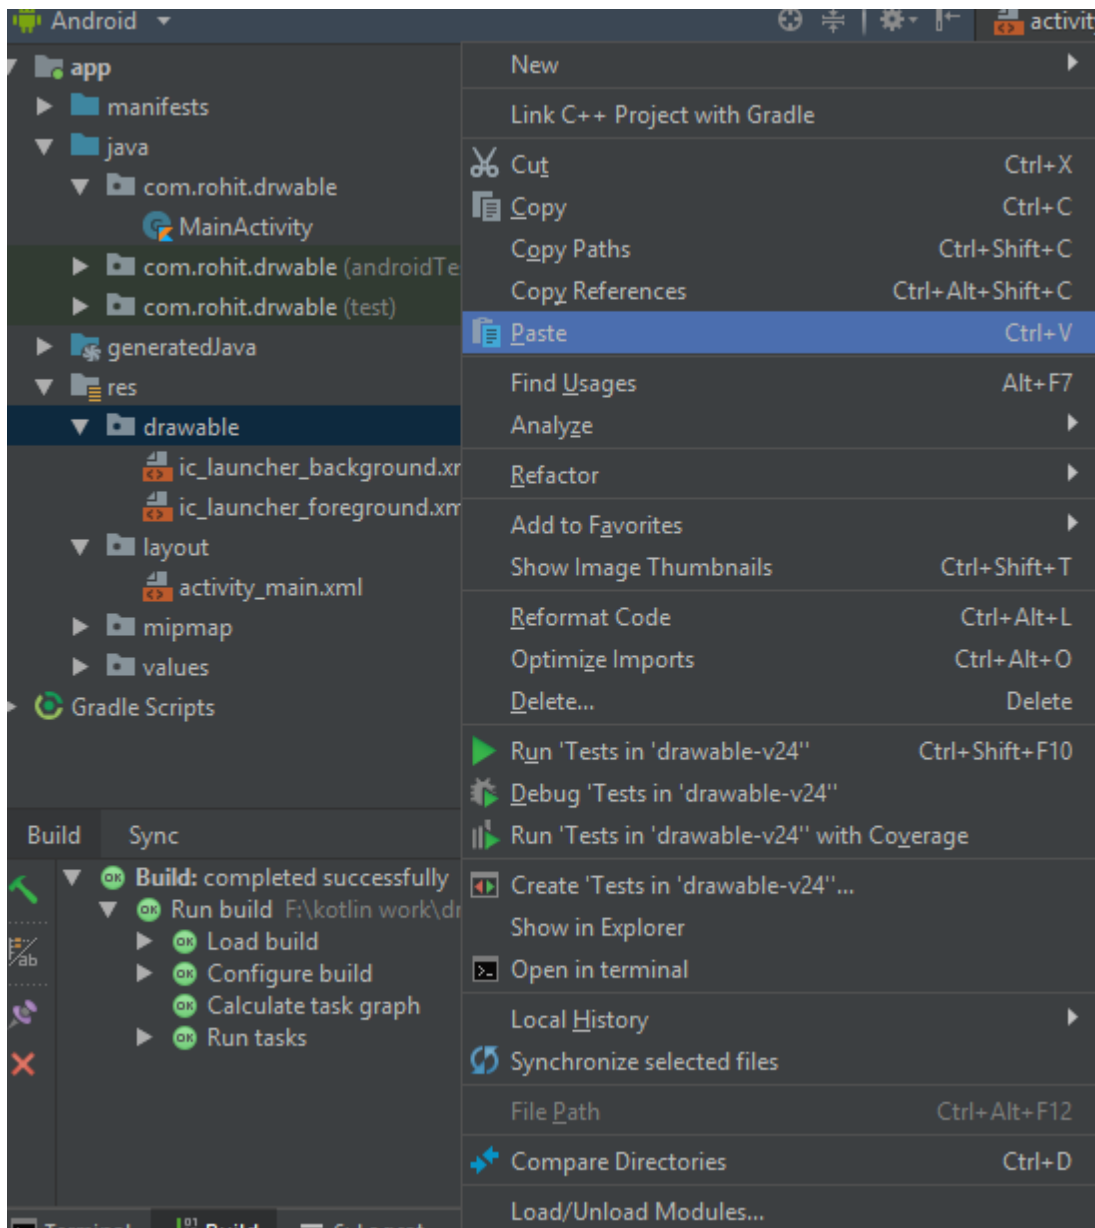

```
<resources>
  <string name="app_name">hello</string>
  <string name="numbers">
    <item>1</item>
    <item>2</item>
    <item>3</item>
  </string>
</resources>
```

**Drawable:**

1. Right click on drawable folder

2. Copy the image if you want to create image drawable
3. Paste that image file inside the drawable folder

**Note:** to create drawable resource, right click on drawable folder and select drawable resource file.

**Dimension, Image:**

**Main\_Activity.kt:**

```
package com.rohit.drivable

import android.support.v7.app.AppCompatActivity
import android.os.Bundle

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
```

```

    super.onCreate(savedInstanceState)
    setContentView(R.layout.activity_main)
}

```

## activity\_main.xml:

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity"
    android:background="@drawable/one">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Hello World!"
        app:layout_constraintBottom_toBottomOf="parent"
        app:layout_constraintLeft_toLeftOf="parent"
        app:layout_constraintRight_toRightOf="parent"
        app:layout_constraintTop_toTopOf="parent"/>

</LinearLayout>

```

## Output:

## PRACTICAL:3

### *activity\_main.xml*

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <Button
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:id="@+id/about_us"
        android:text="About us"
        android:textSize="24sp"/>
</RelativeLayout>
```

### MainActivity.kt

```
package com.example.dell.prcs3

import android.content.Intent
import android.support.v7.app.AppCompatActivity
import android.os.Bundle
import android.util.Log
import kotlinx.android.synthetic.main.activity_main.*

class MainActivity : AppCompatActivity()
{
    val TAG="Main Activity"

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        Log.d(TAG, "In onCreate")
        about_us.setOnClickListener{
            val i = Intent(this, Aboutus::class.java)
            startActivity(i)
        }
    }
    override fun onStart()
    {
        super.onStart()
        Log.d(TAG, "In onStart")
    }
    override fun onStop()
    {
        super.onStop()
        Log.d(TAG, "In onStop")
    }
}
```

```

override fun onPause()
{
    super.onPause()
    Log.d(TAG, "In onPause")
}
override fun onDestroy()
{
    super.onDestroy()
    Log.d(TAG, "In onDestroy")
}
override fun onRestart()
{
    super.onRestart()

}
override fun onResume()
{
    super.onResume()
    Log.d(TAG, "In onResume")
}
}

```

## About US.kt

```

package com.example.dell.prcs3

import android.os.Bundle
import android.support.v7.app.AppCompatActivity
import android.util.Log
import android.widget.Toast

class Aboutus : AppCompatActivity()
{
    val TAG="Main Activity"
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        Log.d(TAG, "inside onCreate")
        Toast.makeText(this, "you are under about
us", Toast.LENGTH_LONG).show()
    }
    override fun onStart()
    {
        super.onStart()
        Log.d(TAG, "In onStart")
    }
    override fun onStop()
    {
        super.onStop()
        Log.d(TAG, "In onStop")
    }
    override fun onPause()
    {
        super.onPause()
    }
}

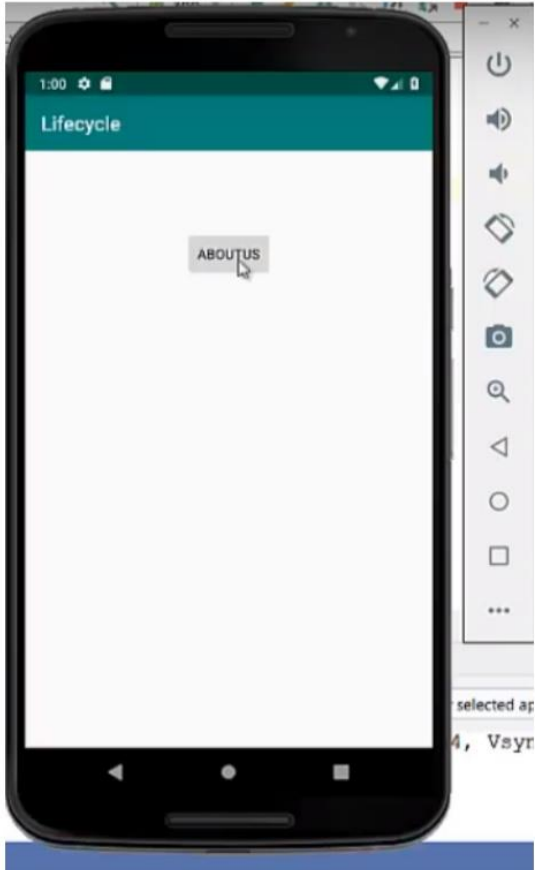

```

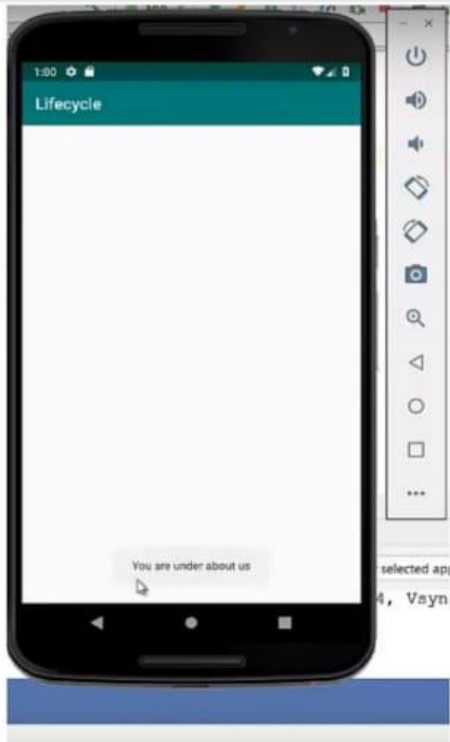

```

        Log.d(TAG, "In onPause")
    }
    override fun onDestroy()
    {
        super.onDestroy()
        Log.d(TAG, "In onDestroy")
    }
    override fun onRestart()
    {
        super.onRestart()
        Log.d(TAG, "In onRestart")
    }
    override fun onResume()
    {
        super.onResume()
        Log.d(TAG, "In onResume")
    }
}

```

## Programs related to different Layouts

Coordinate, Linear, Relative, Table, Absolute, Frame, List View, Grid View.

### 1. linear layout:

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="fill_parent"
    android:layout_height="fill_parent"
    android:orientation="vertical" >

    <Button android:id="@+id/btnStartService"
        android:layout_width="270dp"
        android:layout_height="wrap_content"
        android:text="start_service"/>

    <Button android:id="@+id/btnPauseService"
        android:layout_width="270dp"
        android:layout_height="wrap_content"
        android:text="pause_service"/>

    <Button android:id="@+id/btnStopService"
        android:layout_width="270dp"
        android:layout_height="wrap_content"
        android:text="stop_service"/>

</LinearLayout>
```

### Output:

## 2. Relative:

```
<RelativeLayout
xmlns:android="http://schemas.android.com/apk/res/android"
android:layout_width="fill_parent"
android:layout_height="fill_p
arent"
android:paddingLeft="16dp"
android:paddingRight="16dp" >

<EditText
android:id="@+id
/name"
android:layout_width="fill_par
ent"
android:layout_height="wrap_co
ntent"
android:hint="@string/reminder
" />

<LinearLayout
android:orientation="vertical"
android:layout_width="fill_paren
t"
android:layout_height="fill_pare
nt"
android:layout_alignParentStart=
```

```

<Button
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:text="New Button"
    android:id="@+id/button2" />

</LinearLayout>

</RelativeLayout>

```

## Output:

### 3. Table: Activity\_main.xml

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TableLayout android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_marginLeft="50dp"
        android:layout_marginTop="150dp">
        <TableRow>
            <Button
                android:id="@+id/btn1"
                android:text="1"
                android:layout_gravity="center"
            />
            <Button
                android:id="@+id/btn2"
                android:text="2"
                android:layout_gravity="center"
            />
            <Button
                android:id="@+id/btn3"
                android:text="3"
                android:layout_gravity="center"
            />
        </TableRow>
        <Button
    </TableRow>
</TableLayout>

```

```
    />
    <Button android:id="@+id/btn4"
        android:text="4"
        android:layout_gravity="center"

        android:id="@+id/btn5"
        android:text="5"
        android:layout_gravity="center"
    /><Button
        android:id="@+id/btn6"
        android:text="6"
        android:layout_gravity="center"
    />
</TableRow>
<TableRow>
    <Button
